

CPD EVENT RECORD

HIP ISSUES

with Mr Nadim Aslam

Recording:
Learning
by Oneself

Summary

This discussion covered the latest in minimally invasive approaches to hip surgery, contrasting success rates and recovery times with other options. Differential diagnosis of hip conditions was covered, with explanations of two types of "clunking hip" and the mechanism behind what is often diagnosed as trochanteric bursitis.

Evaluation, Reflection and Impact on Practice (this part of the certificate is **not** automatically generated - it has been entered by the participant)

As a result of this discussion I feel much better able to advise patients on the options available to them should they need a hip replacement, as well as the likely rehabilitation time. The information on "trochanteric bursitis" will also help inform my treatment of patients with this diagnosis.
