

CPD EVENT RECORD

UNLOADER BRACES

with Giles Leeming

Live Event:
Learning
With Others

The unloader brace is predominantly used for unicompartmental knee OA and aims to relieve pressure and pain by applying a transverse force. In most cases this will be lateral to medial, since in 80% cases it is the medial compartment which is affected. The speaker demonstrated fitment of the brace and discussed indications, contraindications and potential problem areas. The instances where NICE guidelines support the use of bracing were explained, and the mechanism for patient referral outlined.

Evaluation, Reflection and Impact on Practice (this part of the certificate is **not** automatically generated - it has been entered by the participant)

As a result of this training I feel better able to advise patients about this particular type of brace, when it might be helpful and how much it is likely to cost. There is potential for it to help with my treatment outcomes in appropriate cases.
