

CPD EVENT RECORD

HIP CASES

with Mr Simon Mellor

Recording:

by Oneself*

Evaluation, Reflection and Impact on Practice:

This discussion centred on the diagnosis and misdiagnosis of hip pain. Bone metastases were covered, and it was emphasised that physical therapy should be exercised with caution if there is a possibility of weakened bone, but it was also stressed that the fear that physical therapy can cause cancer to spread is unfounded. As always, the necessity to take a thorough case history was emphasised, in this case to reveal significant medical history.

Mr Mellor described a case which appeared to be hip related but on physical examination turned out to be an inguinal hernia - the pain referral pattern had initially been misleading. He also talked about hamstring avulsion injuries which, though rare, are important since long delays in referral for surgery can make repair more difficult.
