

CPD EVENT RECORD

SPINAL CASES - CES AND DIFFERENTIALS

with Mr Bob Chatterjee

Recording:
*Learning
by Oneself*

Summary

This discussion revisited the topic of cauda equina syndrome: presentation, signs, symptoms and referral process. The need for speedy referral as emphasised and attendees were reassured that they are right to insist on physical and MRI assessment, even if they are met with an initial reluctance from GPs or A&E. Back pain differential diagnoses were also covered, including kidney stones, lung tumour and AAA.

Evaluation, Reflection and Impact on Practice

I undertook this training because I felt the need to ensure I was able to recognise possible red flag conditions. As a result I feel more confident that I could stand my ground if my concerns are not shared by conventional practitioners, and I am better able to distinguish some of the rare conditions which mimic MSK pain. Thus my patients are better served.

Confirmation

I confirm that this is an accurate reflection of my learning during this event.
