

CPD EVENT RECORD

Knee Surgery and COVID-19 *with Mr Ian McDermott*

Evaluation, Reflection and Impact on Practice:

This discussion covered 3 different types of knee condition, locked, septic and acute injury. Mr McDermott explained the diagnostic criteria and factors which might render them urgent in the eyes of the NHS. There were useful videos illustrating the conditions, and sufficient information was given for telephone triage where face-to-face consultations were not possible.

It addressed the need to be able to conduct an appropriate patient evaluation, extracting information by the most suitable method, and to deliver safe and competent treatment as a result. It also looked at ways to help patients care for themselves, especially post-surgery.

It contributed to a practitioner's need to be able to keep patients from harm, and addressed the wider role of a practitioner in the healthcare community.
