

CPD EVENT RECORD

SPONDYLOLISTHESIS - A TREATMENT PROTOCOL

with Simeon Niel-Asher

Recording:
*Learning
by Oneself*

Summary

This discussion covered classification, aetiology, signs and symptoms of spondylolistheses. The benefits of imagery were covered, as were possible differentials. Accepting the lack of robust research into effectiveness, the speaker outlined a trigger-point approach which had proved very successful with a very large number of patients in his own practice.

Evaluation, Reflection and Impact on Practice

Spondylolisthesis can be difficult to diagnose in the absence of radiological evidence, so I attended this CPD in order to ensure my knowledge of the condition was as comprehensive as possible. In addition to being reassured that much of my current understanding was correct, I have taken away some useful pointers on treatment which I can use where appropriate on my own patients.

Confirmation

I confirm that this is an accurate reflection of my learning during this event.
