With Others*

Evaluation, Reflection and Impact on Practice:

This discussion examined the quality of data evidence for a variety of healthcare interventions and procedures. These included coronavirus reporting and protocols, diabetes, cancer and particularly cardiovascular disease. The reliability of the medical evidence-base as a whole was touched upon and some areas where it was open to misinterpretation explained. The role of practitioners in communicating evidence to patients, especially when that evidence conflicted with NICE or other guidelines was considered and the need for a balanced view was emphasised. The potential for personal belief, instinct or conviction to impair one's analysis of evidence was made clear.

Reflection:

My reason for taking part in this CPD was borne of a desire to ensure that I can offer valuable healthcare advice to patients, even when it relates to areas outside my own area of medical expertise. From this training, I am better able to understand the evidence pertaining to coronavirus and CVD, and am reminded of how I might effectively and constructively communicate that knowledge to patients. This will contribute significantly to instilling confidence in those patients, and helping through contextual components to improve their treatment outcomes.

Chiropractic Code 2016

A Put the health interests of patients first

A1 A2 A3 A4 A5 A6 A7

C Provide a good standard of clinical care and practice
